

Staging Directions' new LED Lecterns light up the stage

Photos don't do these lecterns justice. But we'll try.

Our two matching lecterns are quickly becoming the most popular editions to our scenic inventory. Each lectern has 5 one-inch frosted plexi-panels that are lit with high-density RGB LED strips. The advantage of this technology is that it enables chase lights, changing colors, or color matching for company colors or event themes. You could have a different look for each presenter or topic, or the lectern could seamlessly flow with the staging design.

All panels are controlled individually, either from a small pocket console onstage or from the lighting board at front of house.

We would love to make these LED lecterns part of your next event. As a full service company, we can meet all of your staging needs. Just contact us for the details.
