High Performance meets Flexibility

Staging Directions is proud to announce the acquisition of the new JBL VerTec 4888 DP-DA/4880ADP-DA line array. This system will allow us to provide high end concert sound for larger national artists at corporate events. Featuring an all digital signal path, the JBL VerTec system is self powered, freeing up valuable backstage floor space. Another benefit of the self-powered system is the ability to control output levels to individual boxes in the array. This allows for better coverage control over longer distances in ballroom and arena events.

For more information on the VerTec series, check out <http://www.jblpro.com/catalog/general/ProductFamily.aspx?Fld=21&MID=4>

For more information on how this new system and Staging Directions can enhance your next event, give us a call.
