Rain in Orlando ...

Staging Directions once again partnered with TBA Global to produce a large-scale event in Orlando, Florida with one of today's most popular corporate entertainers .

The 1900 attendees from a multi-national technology and consulting firm thoroughly appreciated the event's presentation: a 32-foot curved center screen, four side screens, and two delay screens. Staging Directions switched the new Christie DLP HD projectors through a Folsom Encore system.

7 projection screens

Twenty-seven additional 42-inch plasmas completed the high-tech scenic theme.

Staging Directions also engineered a round stage thrust, which gave presenters better interaction with attendees. Those who couldn't be there in person viewed the event via live simulcast.

MAY 2011

One of the most memorable parts of the show was leading Beatles tribute band "Rain." They delighted the audience with an encore performance of their Broadway show complete with costume changes and a spectacular light show.

Beatles' trademark harmonies never sounded better thanks to Staging Directions' brand new JBL VerTec line array.
